
POLICY FOR QUALITY, THE ENVIRONMENT AND OCCUPATIONAL

HEALTH AND SAFETY (SST)

SISEMED forms part of COSTAISA GROUP, a corporation with more than 50 years of experience in the health sector. This background provides us with exceptional market knowledge and expertise.

SISEMED's aim is to provide specialised, quality service for the electromedicine sector. Our services must adapt to customer needs and also be profitable for shareholders. This is only possible with a team that enjoys its work and whose professionalism is acknowledged.

We want to be the nation's leading provider of comprehensive and quality electromedical services in order to guarantee the management, support and interoperability of our customers' electromedical equipment, while protecting the environment and remaining committed to occupational health and safety in the work we do.

Our operations and the relationships with the individuals who comprise this project are guided by the following values:

Excellence: We believe that excellence is a work habit instead of a goal in itself. It is the tool we use to maintain the efficiency of the integrated management system as well as the continuous improvement of our processes for the management and execution of OHS.

Customer orientation: We aim to help and serve customers, to understand, fulfil and meet their needs, and to exceed their expectations.

Teamwork: Active collaboration between team members allows us to attain excellent results and to create an optimal work environment where we can enjoy a job well done while learning from colleagues, our daily activities and our mistakes.

Commitment to the environment: Preventing the contamination that results from our operations, focusing on waste management, and optimising the natural and energy resources that are consumed.

Commitment to occupational health and safety (SST) and sanitary regulations : Achieve for our professional team an adequate level of safety and health at work with the commitment to reduce the risk associated with our activities and prevent and minimize incidents related to them, including the consultation of workers, their participation or that of their representatives and, in turn, a total commitment to comply with health regulations.

For this, we rely on strategies for the prevention of occupational risks and the coordination of business activities between our clients and suppliers..

Legal compliance: Guaranteeing compliance with applicable regulations for the services provided as well as with environmental and occupational health and safety legislation, and other requirements that are voluntarily met in the area of the environment, sanitary and OHS hazards.

Transparency and honesty: Working in a respectful, honest and responsible manner is a key principle that guides our operations. It is more than just an individual attitude; it is also a basis for interactions between employees and with stakeholders.

Josep A. Rguez. Leyva
Director General
